### 3 Introduction

The following document details the Module Interface Specifications for CampusConnections. CampusConnections is a social media application with impressive AR camera and real time location map features that allows McMaster University students and visitors have an immersive user experience and expand their social networking. This application allows users to make new friends online and also encourage users to strengthen the friendship by in-person meet-ups with a on-campus location-sharing feature. It also provides heat maps of events and users, which allows students to join the most popular activities on campus. Besides, the application maintainers will share up-to-date events and lectures information for the community. The MIS will detail specifications for the project described above.

Complementary documents include the System Requirement Specifications (SRS) and Module Guide. (MG) The full documentation and implementation can be found at <https://github.com/beatlepie/4G06CapstoneProjectTeam2/blob/main/docs/SRS-Volere/SRS.pdf> and <https://github.com/beatlepie/4G06CapstoneProjectTeam2/blob/main/docs/Design/SoftArchitecture/MG.pdf>

### 4 Notation

The structure of the MIS for modules comes from Hoffman and Strooper (1995), with the addition that template modules have been adapted from Ghezzi et al. (2003). The mathematical notation comes from Chapter 3 of Hoffman and Strooper (1995). For instance, the symbol  $:=$  is used for a multiple assignment statement and conditional rules follow the form  $(c_1 \Rightarrow r_1 | c_2 \Rightarrow r_2 | \dots | c_n \Rightarrow r_n)$ .

The following table summarizes the primitive data types used by Software Engineering.

Data Type	Notation	Description
character	char	a single symbol or digit
integer	$\mathbb{Z}$	a number without a fractional component in $(-\infty, \infty)$
natural number	$\mathbb{N}$	a number without a fractional component in $[1, \infty)$
real	$\mathbb{R}$	any number in $(-\infty, \infty)$
boolean	$\mathbb{B}$	True or False
sequence of T	$\langle T \rangle$	a list of object with type T
asynchronous step T	Task $\langle T \rangle$	an asynchronous result of T

The specification of Software Engineering uses some derived data types: sequences, strings, and tuples. Sequences are lists filled with elements of the same data type. Strings are sequences of characters. Tuples contain a list of values, potentially of different types. In

addition, Software Engineering uses functions, which are defined by the data types of their inputs and outputs. Local functions are described by giving their type signature followed by their specification.

## 5 Module Decomposition

The following table is taken directly from the Module Guide document for this project.

Level 1	Level 2
Hardware-Hiding	
	AR Interface Module
	Map Interface Module
	User Module
Behaviour-Hiding	Lecture Module
	Event Module
	Account Module
	Permission Module
	User Profile Module
	User Login Module
	Friend Manager Module
	Friend Request Module
	Friend Chat Module
	Lecture Detail View Module
	Event Detail View Module
	Lecture List Manager Module
	Event List Manager Module
Software Decision	Database Module
	Server Module
	Authentication Module
	AR Camera Module
	Mapbox Module
	Activity Detail View Module
	Pagination and Filter Module

Table 1: Module Hierarchy

## **6 MIS of User Module**

### **6.1 Module**

User

### **6.2 Uses**

Lecture Module, Event Module

### **6.3 Syntax**

#### **6.3.1 Exported Constants**

None

### 6.3.2 Exported Access Programs

Name	In	Out	Exceptions
User	String, String, Uri, String, $\mathbb{R}$ , <User>, <User>, <Lecture>, <Event>	User	-
SetNickName	String	-	-
SetPhotoUri	Uri	-	-
SetProgram	String	-	-
SetLevel	$\mathbb{R}$	-	-
AddFriend	User	-	-
RemoveFriend	User	-	IndexOutOfBounds Ex- ception
AddRequester	User	-	-
RemoveRequester	User	-	IndexOutOfBounds Ex- ception
AddLecture	Lecture	-	-
RemoveLecture	Lecture	-	IndexOutOfBounds Ex- ception
AddEvent	Event	-	-
RemoveEvent	Event	-	IndexOutOfBounds Ex- ception

## 6.4 Semantics

### 6.4.1 State Variables

- email: String, User email
- nickName: String, User nickName
- photoUri: Uri, User avatar
- program: String, User program
- level:  $\mathbb{R}$ , User program level
- friends: <User>, List of friends

- requesters: <User>, List of friend requester
- lectures: <Lecture>, Pinned lecture
- events: <Event>, Pinned event

#### 6.4.2 Environment Variables

None

#### 6.4.3 Assumptions

Strings passed as input are of valid format, all the state variables of the object are directly accessible so getter is not needed.

#### 6.4.4 Access Routine Semantics

User(email, nickName, photoUri, program, level, friends, requesters, lectures,events):

- transition:  $email, nickName, photoUri, program, level, friends, requesters, lectures, events := email, nickName, photoUri, program, level, friends, requesters, lectures, events$
- output:  $out := self$
- exception: none

SetNickName(newName):

- transition:  $nickName := newName$
- output: none
- exception: none

SetPhotot(newUri):

- transition:  $photoUri := newUri$
- output: none
- exception: none

SetProgram(newProgram):

- transition:  $program := newProgram$
- output: none

- exception: none

SetLevel(newLevel):

- transition:  $level := newLevel$
- output: none
- exception: none

AddFriend(newFriend):

- transition:  $friends := friends + \{newFriend\}$
- output: none
- exception: none

RemoveFriend(targetFriend):

- transition:  $friends := friends - \{targetFriend\}$
- output: none
- exception:  $exc := targetFriend \notin friends \Rightarrow IndexOutOfBoundException$

AddRequester(newRequester):

- transition:  $requesters := requesters + \{newRequester\}$
- output: none
- exception: none

RemoveRequester(targetRequester):

- transition:  $requesters := requesters - \{targetRequester\}$
- output: none
- exception:  $exc := targetRequester \notin requesters \Rightarrow IndexOutOfBoundException$

AddLecture(newLec):

- transition:  $lectures := lectures + \{newLec\}$
- output: none
- exception: none

RemoveLecture(targetLecture):

- transition:  $lectures := lectures - \{targetLecture\}$
- output: none
- exception:  $exc := targetLecture \notin lectures \Rightarrow IndexOutOfBoundException$

AddEvent(newEvent):

- transition:  $events := events + \{newEvent\}$
- output: none
- exception: none

RemoveEvent(targetEvent):

- transition:  $events := events - \{targetEvent\}$
- output: none
- exception:  $exc := targetEvent \notin events \Rightarrow IndexOutOfBoundException$

#### 6.4.5 Local Functions

None

## 7 MIS of Lecture Module

### 7.1 Module

Lecture

### 7.2 Uses

None

### 7.3 Syntax

#### 7.3.1 Exported Constants

None

#### 7.3.2 Exported Access Programs

Name	In	Out	Exceptions
Lecture	String, String, String, String, String	Lecture	-
SetName	String	-	-
SetInstructor	String	-	-
SetTime	String	-	-
SetLocation	String	-	-

### 7.4 Semantics

#### 7.4.1 State Variables

- code: String, Lecture code
- name: String, Lecture name
- instructor: String, Lecture instructor
- time: String, Lecture time
- location: String, Lecture location

### 7.4.2 Environment Variables

None

### 7.4.3 Assumptions

Strings passed as input are of valid format, all the state variables of the object are directly accessible so getter is not needed.

### 7.4.4 Access Routine Semantics

Lecture(lecCode, lecName, lecInstructor, lecTime, lecLocation):

- transition: *code, name, instructor, time, location := lecCode, lecName, lecInstructor, lecTime, lecLocation*
- output: *out := self*
- exception: none

SetName(newName):

- transition: *name := newName*
- output: none
- exception: none

SetInstructor(newInstructor):

- transition: *instructor := newInstructor*
- output: none
- exception: none

SetTime(newTime):

- transition: *time := newTime*
- output: none
- exception: none

SetLocation(newLocation):

- transition: *location := newLocation*
- output: none
- exception: none

### 7.4.5 Local Functions

None

## 8 MIS of Event Module

### 8.1 Module

Event

### 8.2 Uses

None

### 8.3 Syntax

#### 8.3.1 Exported Constants

None

#### 8.3.2 Exported Access Programs

Name	In	Out	Exceptions
Event	String, String, String,DateTime, $\mathbb{R}$ , String, $\mathbb{B}$	Event	-
setDescription	String	-	-
setOrganizer	String	-	-
setStartTime	DateTime	-	-
setDuration	$\mathbb{R}$	-	-
setLocation	String	-	-
setPublic	$\mathbb{B}$	-	-

### 8.4 Semantics

#### 8.4.1 State Variables

- name: String, Event name
- description: String, Event description
- organizer: String, Event hosted by
- startTime: DateTime, Event start date and time
- duration:  $\mathbb{R}$ , Event duration (in minutes)

- location: String, Event location (room and building)
- public :  $\mathbb{B}$ , is event public

#### 8.4.2 Environment Variables

None

#### 8.4.3 Assumptions

Strings passed as input are of valid format, all the state variables of the object are directly accessible so getter is not needed.

#### 8.4.4 Access Routine Semantics

Event(name, description, organizer, startTime, duration, location, public):

- transition: *name, description, organizer, startTime, duration, location, public := name, description, organizer, startTime, duration, location, public*
- output: *out := self*
- exception: none

SetDescription(newDescription):

- transition: *description := newDescription*
- output: none
- exception: none

SetOrganizer(newOrganizer):

- transition: *organizer := newOrganizer*
- output: none
- exception: none

SetStartTime(newTime):

- transition: *startTime := newTime*
- output: none
- exception: none

SetDuration(newDuration):

- transition: *duration := newDuration*
- output: none
- exception: none

SetLocation(newLocation):

- transition: *location := newLocation*
- output: none
- exception: none

SetPublic(newPublicity):

- transition: *public := newPublicity*
- output: none
- exception: none

#### **8.4.5 Local Functions**

None

## 9 MIS of Account Module

### 9.1 Module

Account

### 9.2 Uses

Database Module, User Module, Authentication Module

### 9.3 Syntax

#### 9.3.1 Exported Constants

None

#### 9.3.2 Exported Access Programs

Name	In	Out	Exceptions
UpdateNickName	String	-	
UpdateProgram	String	-	
UpdateLevel	N	-	
AddFriend	User	-	
DeleteFriend	User	IndexOutOfBounds Ex- ception	
AddRequest	User	-	
DeleteRequest	User	IndexOutOfBounds Ex- ception	
PinLecture	Lecture	-	
UnPinLecture	Lecture	IndexOutOfBounds Ex- ception	
PinEvent	Event	-	
UnPinEvent	Event	IndexOutOfBounds Ex- ception	

### 9.4 Semantics

#### 9.4.1 State Variables

- User: User User of the account

### 9.4.2 Environment Variables

None

### 9.4.3 Assumptions

All the state variables of User is accessible directly so there is no getters in the module.

### 9.4.4 Access Routine Semantics

UpdateNickName(newName):

- transition:  $User.SetNickName(newName)$
- output: none
- exception: none

UpdateProgram(newProgram):

- transition:  $User.SetProgram(newProgram)$
- output: none
- exception: none

UpdateLevel(newLevel):

- transition:  $User.SetLevel(newLevel)$
- output: none
- exception: none

AddFriend(newFriend):

- transition:  $User.AddFriend(newFriend)$
- output: none
- exception: none

DeleteFriend(targetFriend):

- transition:  $User.RemoveFriend(targetFriend)$
- output: none

## 22 MIS of Database Module

### 22.1 Module

FirestoreDatabase

This module uses Firebase Realtime Database library. For details of all syntax and semantics of exported constants and access programs, see [Firestore database documentation](#).

### 22.2 Uses

### 22.3 Syntax

#### 22.3.1 Exported Constants

See [Firestore database documentation](#).

#### 22.3.2 Exported Access Programs

The following table will show some functions the application uses most frequently, for more details, see [Firestore database documentation](#).

Name	In	Out	Exceptions
Child	String	DatabaseReference	PermissionDenied, NetworkError, ExpiredToken
HasChild	String	$\mathbb{B}$	PermissionDenied, NetworkError, ExpiredToken
RemoveValueAsync	String	Task< $\mathbb{B}$ >	PermissionDenied, NetworkError, ExpiredToken
SetValueAsync	String, String	Task< $\mathbb{B}$ >	PermissionDenied, NetworkError, ExpiredToken
GetValueAsync	String	Task<DataSnapshot>	PermissionDenied, NetworkError, ExpiredToken
GoOffline	-	-	PermissionDenied, NetworkError, ExpiredToken
GoOnline	-	-	PermissionDenied, NetworkError, ExpiredToken

## 22.4 Semantics

### 22.4.1 State Variables

None

### 22.4.2 Environment Variables

- DBreference: `Firebase.Database.DatabaseReference`  
A reference to the root location of this database
- User: `Firebase.Auth.FirebaseUser`  
The current user that operates this database
- PermittedUsers: set of String  
The list of user emails that are allowed to read the database content
- Admins: set of String  
The list of user emails that are allowed to edit the database content

### 22.4.3 Assumptions

Assume the database connection is stable and it will not disconnect unless the user disconnect it manually.

### 22.4.4 Access Routine Semantics

Child(pathString):

- transition: none
- output:  $out := \text{DatabaseReference to pathString relative to the root}$
- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin PermittedUsers \Rightarrow PermissionDenied$

HasChild(pathString):

- transition: none
- output:  $out := DBreference.Child(pathString) = \text{null}$
- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin PermittedUsers \Rightarrow PermissionDenied$

RemoveValueAsync(pathString):

- transition:  $DBreference.Child(pathString) := \text{null}$
- output:  $out := DBreference.HasChild(pathString)$
- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin Admins \Rightarrow PermissionDenied$

SetValueAsync(pathString, value):

- transition:  $DBreference.Child(pathString) := value$
- output:  $out := DBreference.Child(pathString) = value$
- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin Admins \Rightarrow PermissionDenied$

GetValueAsync(pathString):

- transition: none
- output:  $out := \text{Snapshot of } DBreference.Child(pathString)$

- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin PermittedUsers \Rightarrow PermissionDenied$

GoOffline():

- transition: Manually disconnect the FirebaseDatabase client from the server and disable automatic reconnection.
- output: none
- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin Admins \Rightarrow PermissionDenied$

GoOnline():

- transition: Manually reestablish a connection to the FirebaseDatabase server and enable automatic reconnection.
- output: none
- exception:  $exc := NoInternet \Rightarrow NetworkError \mid TokenExpired \Rightarrow ExpiredToken \mid User.email \notin Admins \Rightarrow PermissionDenied$

#### 22.4.5 Local Functions

None

## 23 MIS of Server Module

### 23.1 Module

RTCServer

### 23.2 Uses

### 23.3 Syntax

#### 23.3.1 Exported Constants

#### 23.3.2 Exported Access Programs

Name	In	Out	Exceptions
SendMessage	User, String	Task	-
SendLocationGroup	Double, Double, Double	Task	-

### 23.4 Semantics

#### 23.4.1 State Variables

#### 23.4.2 Environment Variables

#### 23.4.3 Assumptions

User identifiers are unique.

#### 23.4.4 Access Routine Semantics

SendMessage(recipient, msg):

- transition: none
- output:  $out := \text{Task}; out.IsCompleted := \text{True}$
- exception: none

SendLocation(friendGroup, lat, lon):

- transition: none
- output:  $out := \text{Task}; out.IsCompleted := \text{True}$
- exception: none

#### 23.4.5 Local Functions

None

## 24 MIS of AR Camera

### 24.1 Module

AR Camera

### 24.2 Uses

### 24.3 Syntax

#### 24.3.1 Exported Constants

#### 24.3.2 Exported Access Programs

Name	In	Out	Exceptions
DetectTarget-		-	-

### 24.4 Semantics

#### 24.4.1 State Variables

#### 24.4.2 Environment Variables

- cameraFeed: 2D array of pixels
- sceneCamera: Camera
- imageTargets: list of Target
- scanTargets: list of Target

#### 24.4.3 Assumptions

#### 24.4.4 Access Routine Semantics

DetectTarget():

- transition: Implicitly invokes the AR Interface when a valid target is detected.
- output: none
- exception: none

#### 24.4.5 Local Functions

None

## 25 MIS of AR Interface

### 25.1 Module

AR Interface

### 25.2 Uses

AR Camera

### 25.3 Syntax

#### 25.3.1 Exported Constants

#### 25.3.2 Exported Access Programs

Name	In	Out	Exceptions
Initialize	(String, <3D Objects>)	<3D -	IllegalArgumentException Exception
Display	String	-	IllegalArgumentException Exception

### 25.4 Semantics

#### 25.4.1 State Variables

- dictionary: Dictionary<String, <3D Objects>>, the dictionary of target name and corresponding AR objects

#### 25.4.2 Environment Variables

#### 25.4.3 Assumptions

#### 25.4.4 Access Routine Semantics

Initialize(target, objects):

- transition:  $dictionary[target] := objects$
- output: none
- exception:  $target \notin dictionary.keys \Rightarrow IllegalArgumentException$

Display(target):

- transition: Displays  $dictionary[target]$  objects in Unity scene
- output: none
- exception:  $target \notin dictionary.keys \Rightarrow IllegalArgumentException$

### 25.4.5 Local Functions

None

## 26 MIS of MapBox

### 26.1 Module

MapBox

Third party library Mapbox

### 26.2 Uses

### 26.3 Syntax

#### 26.3.1 Exported Constants

#### 26.3.2 Exported Access Programs

Name	In	Out	Exceptions
Map	-	-	IllegalArgument Exception
Display	-	-	-
ChangeStyle	String	-	IllegalArgument Exception
Pan	$(\mathbb{R}, \mathbb{R})$	-	
Zoom	$\mathbb{N}$	-	

### 26.4 Semantics

#### 26.4.1 State Variables

- MapStyle: String
- MapCenter:  $(\mathbb{R}, \mathbb{R})$
- Zoom:  $\mathbb{N}$

#### 26.4.2 Environment Variables

- APIKey: String

#### 26.4.3 Assumptions

#### 26.4.4 Access Routine Semantics

Map():

- transition: Check APIKey and initialize the map

- output: none
- exception:  $exc := APIKeyExpires \Rightarrow IllegalArgumentException$

Display():

- transition: Displays a map with default state variables
- output: none
- exception: none

ChangeStyle(style):

- transition:  $MapStyle := style$
- output: none
- exception:  $exc := style \notin MAPSTYLES \Rightarrow IllegalArgumentException$

Pan((long, lat)):

- transition:  $MapCenter := (long, lat)$
- output: none
- exception: none

Zoom(scale):

- transition:  $Zoom := scale$
- output: none
- exception: none

#### 26.4.5 Local Functions

None

#### 26.4.6 Local Constants

MAPSTYLES = a sequences of map styles with type String

## 27 MIS of Map Interface

### 27.1 Module

Map Interface

### 27.2 Uses

Map Module, Server Module, Database Module

### 27.3 Syntax

#### 27.3.1 Exported Constants

#### 27.3.2 Exported Access Programs

Name	In	Out	Exceptions
HandleInputBuilding	-	-	-
DisplayAvatar	Uri, ( $\mathbb{R}$ , $\mathbb{R}$ )	-	-
DisplayUserHeatMap	-	-	-
DisplayEventHeatMap	-	-	-

### 27.4 Semantics

#### 27.4.1 State Variables

- building: list of BuildingLocation

#### 27.4.2 Environment Variables

- camera: Camera

#### 27.4.3 Assumptions

#### 27.4.4 Access Routine Semantics

HandleInputBuilding():

- transition: Opens user interface when a building marker is tapped
- output: none
- exception: none

DisplayAvatar(photoUri, (long, lat)):

- transition: Displays the corresponding avatar on the map at (long, lat)

- output: none
- exception: none

DisplayUserHeatMap():

- transition: Retrieves collected user location data from the database and plot them on the map
- output: none
- exception: none

DisplayEventHeatMap():

- transition: Retrieves collected event location data from the database and plot them on the map
- output: none
- exception: none

#### **27.4.5 Local Functions**

None

## 28 MIS of Friend Chat

### 28.1 Module

Friend Chat

### 28.2 Uses

Server Module

### 28.3 Syntax

#### 28.3.1 Exported Constants

#### 28.3.2 Exported Access Programs

Name	In	Out	Exceptions
StartConnection	String, String	-	-
SendMessage	User, String	-	-
ReceiveMessage	User, String	-	-

### 28.4 Semantics

#### 28.4.1 State Variables

- connection: HubConnection
- onMessageReceived: Action

#### 28.4.2 Environment Variables

#### 28.4.3 Assumptions

#### 28.4.4 Access Routine Semantics

StartConnection(url, handler):

- transition: Creates a new HubConnection and stores it in connection. Connects the given handler to the server endpoint.
- output: none
- exception: none

SendMessage(recipient, message):

- transition: Sends a message to the recipient through the server hub connection.

- output: none
- exception: none

ReceiveMessage(sender, message):

- transition: Receives a message from the server hub connection. The sender's id is received as well.
- output: none
- exception: none

#### **28.4.5 Local Functions**

None

## 29 Appendix

### 29.1 Database Tables

#### User

Column Name	Type	Description
email	String	ID of a user
nickName	(Optional) String	Nickname/display name of a user
photoUri	(Optional) Uri	Visual Avatar
program	(Optional) String	Study field
level	(Optional) int	Level of program
friends	(Optional) <User>	List of friends
friendRequests	(Optional) <User>	List of requesters
lectures	(Optional) <Lecture>	List of pinned lecture
events	(Optional) <Event>	List of pinned event

#### Lecture

Column Name	Type	Description
code	String	ID of a course, course code
name	(Optional) String	formal name of a course
instructor	(Optional) String	name of the instructor
time	(Optional) String	Includes start and end time in a weekly schedule
location	(Optional) String	Building and room

#### Event

Column Name	Type	Description
name	String	ID of an event
description	(Optional) String	event description
organizer	(Optional) String	organizer of the event
startTime	(Optional) DateTime	when it starts
duration	(Optional) int	how long is the event (in minutes)
location	(Optional) String	Building and room
isPublic	$\mathbb{B}$	If it is a public event
